Art Unit No. 2684

LISTING OF CLAIMS

1.   (currently amended) A network node device for dynamically and selectively connecting one or more telephone wirelines to one or more wireless connections, the network node device comprising:

one or more connections to one or more telephone wirelines;

one or more wireless signal generators supporting one or more wireless connections to one or more wireless devices; 3(30 -34

an interconnection switch that makes and breaks one or more interconnections between the telephone wirelines and the respective wireless signal generators;

at least one storage location for storing unique information for each of a plurality of wireless devices; and

YOR920000632   -2-

Serial No. 09/664,479
Art Unit No. 2684

a bridge that dynamically bridges signals from
multiple wireless connections to one or more of the
telephone wirelines based on <u>stored unique information</u> ~~user privacy input~~.

2. (original) The network node device of Claim 1 further
comprising a verifier that verifies the validity of a
request from a wireless device through a wireless connection
for the bridging of signals.

3. (withdrawn) A method of a network node device of
establishing call privacy for a wireless device connected to
the network node device comprising the steps of :

receiving a request for privacy from a wireless device;

storing the request for privacy in a memory of the
network node device as a stored privacy request;

using the stored privacy request as part of
establishing eligibility of a request by one or more
wireless devices to join an in-progress call; and

Art Unit No. 2684

C|

denying eligibility of the request to join an in
progress call if privacy had been requested for the
in-progress call.

4. (withdrawn) The method of claim 3 where the network node
device further comprises the step of:

establishing eligibility of the wireless device to request
privacy.

5. (withdrawn) The method of claim 3 where the establishing
call privacy made during a call in progress further
comprises the step of:

dropping the connection to other wireless devices
connected to the call in progress.

6. (withdrawn) A storage medium containing a computer
program to direct a network node device to perform the
following program steps:

YOR920000632   -4-

Serial No. 09/664,479
Art Unit No. 2684

receiving a request for privacy from a wireless device;

storing the request for privacy in a memory of the
network node device as a stored privacy request;

using the stored privacy request as part of
establishing eligibility of a request by one or more
wireless devices to join an in-progress call; and

denying eligibility of the request to join an in
progress call if privacy had been requested for the
in-progress call.

7. (withdrawn) The storage medium of claim 6 where the
computer program further includes instruction for the
network node device to establish eligibility of the wireless
device to request privacy.

8. (withdrawn) The storage medium of claim 6 where the
computer program further includes instruction for the
network node device, when establishing call privacy made

Serial No. 09/664,479
Art Unit No. 2684

during a call in progress, to drop the connection to other
wireless devices connected to the call in progress.

9. (new) The network node device of Claim 1 wherein said
unique information comprises a unique identifier and unique
service information for each wireless device and wherein
said bridge dynamically and selectively bridges signals from
a wireless device to one of the telephone wirelines based on
the unique identifier of the wireless device and said unique
service information.

10.   (new) The network node device of Claim 9 wherein said
unique service information comprises at least one of service
access, priority, and privacy information.

11. (new)   The network node device of Claim 9 wherein said
bridge is adapted to alter the bridging of signals from at
least one wireless device to one of the telephone wirelines
in response to a change to said unique service information
after a wireless connection has already been made.

Serial No. 09/664,479
Art Unit No. 2684

12.   (new) The network node device of Claim 9 wherein said bridge is adapted to deny bridging of a wireless connection to one or more telephone wirelines based on said unique service information.
